

A National Survey For Young Onset Dementia

A National Survey For Young Onset Dementia

Research Study - The Angela Project: Improving diagnosis and post-diagnostic support for younger people with dementia, families and supporters.

Please join The Angela Project to improve services and support for younger people living with dementia, family members and supporters. They are from University College London and the Universities of Bradford, Northampton and Surrey and are involved in a research study called the Angela Project. The Angela Project is dedicated to Angela, a lady with young onset dementia who went undiagnosed for 3 years before her symptoms were recognised.

Currently, many younger people living with dementia and families receive limited services and support in the UK throughout the time they live with dementia. They want to understand how to improve support for younger people with dementia, families and supporters. From this work, they will produce information and guidance on best practice in diagnosis and post diagnostic support, which can inform others who seek to develop effective services.

If you live with a diagnosis of dementia, which was received before you reached the age of 65; or if you are related to, or supporting someone who received a diagnosis of dementia before the age of 65; you are invited to complete a survey. You can complete it online by following this link:

<https://bradford.onlinesurveys.ac.uk/the-improving-support-and-service-use-survey>

Or, alternatively you can complete it on paper by contacting the Project at:

Vasileios Stamou, V.Stamou@bradford.ac.uk, Tel. : 01274 233 994, Mob.: 07876 790 462,
School of Dementia Studies, Horton A Building, University of Bradford, Richmond Road, Bradford, BD7 1DP.

They would welcome enquiries if you would like to find out more about the research. Please feel free to send an email, call or send a text message and a response will be immediate.
